- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
- 4. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted:

Group I, claim(s) 80-99, drawn to a method of, or, sampling apparatus for, sampling a multi-phase fluid stream.

Application/Control Number: 10/573,619 Page 3

Art Unit: 2856

Group II, claim(s) 100, drawn to a method of sampling a multi-phase fluid stream.

5. The inventions listed as Groups 1-2 do not relate to a single general inventive

concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or

corresponding special technical features for the following reasons:

Group 1 requires the special technical feature of controlling the flow rate of a sampled

portion of the fluid stream according to the ratio of the flow rate of the sampled portion

to the flow rate of the fluid stream in order to obtain substantially isokinetic sampling of

the fluid stream which is not required by Group 2.

Group 2 requires the special technical feature of controlling the flow rate of a sampled

portion of the fluid stream using a measured differential pressure between the multi-

phase fluid and the sampled pressure as a control signal in order to obtain substantially

isokinetic sampling of the fluid stream which is not required in Group 1 as evidenced by

such, at most, being required only in dependent claims 83 and 94-96 therein.

6. Before any allowance, and preferably, but not required to be, included in the

response to this action, appropriate ones and forms of the headings, except for heading

(a), listed below must be inserted into the specification, preferably by Applicant.

The following guidelines illustrate the preferred layout for the specification of a

utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (I) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).
